

EDUCATION

B.S. Computer Science & Business Administration · University of Southern California

Los Angeles, CA | Dec 2025

Minor in Cloud Computing with DevOps · Dean's List (All Semesters) · Alpha Lambda Delta

Relevant Coursework: Data Structures & Algorithms, Cloud Computing with DevOps, Discrete Math, Linear Algebra, Object-Oriented Programming, Principles of Software Engineering, Data Validation, Business Valuation Modelling

SKILLS

Languages: C++, Java, Python, JavaScript, Kotlin, Swift, SQL, HTML, CSS

Frameworks/Libraries: PyTorch, Scikit-learn, TensorFlow, NumPy, Pandas, React.js, Node.js, Jest, MOCHA

Tools: Git, GitHub, VSCode, DBeaver, JIRA, Kubernetes, Docker, Bitbucket, Postman, AOSP

Databases: PostgreSQL, MySQL, PHPMysqlAdmin

PROFESSIONAL EXPERIENCE

Software Engineer · Meta — Reality Labs Wearables

New York, NY | Jan 2025 – Present

- Shipped 5 privacy & identity features across glasses, wrist, display glasses, and neural wristband devices, working directly on System UI and spanning UX through server-side across AOSP, Android, iOS, Kotlin, Swift, and C++.
- Improved account sync success rate by 2–3% by diagnosing and resolving cache errors in device record sync; collaborated with XFN connectivity and onboarding teams to trace and fix root cause.
- Built and shipped a silent push notification system for wearables subscription updates, achieving 100% server dispatch success across 543 pushes.
- Added account sync support for new device onboarding to the Meta AI app, enabling seamless identity continuity across the glasses ecosystem.
- Drove team test coverage from 61.85% to 72.83% by building automations and plugins that automatically generate unit tests across the codebase.
- Improved team AI productivity by creating context files, skills, and plugins that enhanced code readability for AI tooling and improved AI self-verify scores.

Software Engineer Intern · Meta

New York, NY | May 2025 – Aug 2025

- Developed an internal debugging tool for the Meta AI app's login flow in Kotlin and Swift, streamlining issue identification.
- Implemented backend services in PHP to support tool functionality and enable seamless integration with existing systems.
- Engineered a logging instrument to capture, store, and query diagnostic data, improving visibility into login flow issues.
- Designed and deployed an interactive dashboard to visualize tool-generated data, enabling faster root cause analysis.
- Wrote 5,000+ lines of production code across 45+ diffs, aided by a technical design document using Figma and Excalidraw.

Software Engineer Intern (ML/AI) · ASML

San Diego, CA | Jun 2023 – Aug 2023

- Led a scanner team of 5 interns focused on improving efficiency of Tin droplet scanner and cameras by 5%.
- Analyzed data from metrology systems using TensorFlow image recognition to improve tin droplet detection.
- Developed distributed, multi-tiered systems for data analysis in lithography systems, improving efficiency by 5%.
- Automated testing and validation of ML models using Python on Windows and Linux systems.

PROJECTS

ASML 'Concepts' Project Management Web Tool

- Engineering a web tool using microservices and RESTful API principles, hosted on AWS RDS.
- Created stored procedures in PostgreSQL and Redis caching, achieving an 82% runtime improvement.
- Implementing deployment via Kubernetes cluster and Docker containerization hosted on EC2.

Postcard Exchange Social Website

- Designed a scalable distributed system for real-time postcard sharing across regions with PostgreSQL for data management.
- Built multi-threading through WebSockets for live activity feeds via TCP connection.
- Created an object-storage gallery with CDN caching, achieving an 80% cache hit rate.
